Cadence License Update

Sashi Subramanian
Cadence Design Systems
Inc.

Current Status

- Presently on v10.8.2.1 on Unix and 10.8.5 on Windows
 - > Stable so far.
- Cadence strongly recommends deploying v10.8.2.1 if you have not already done so.

11/14/2007

Future Plans

- V10.8.6 has been released by Macrovision
 - > Will rollout once it becomes available on all Cadence supported platforms
 - > Tentatively planned for May 2008
- Evaluate FLEXnet 11.X
 - > Only an evaluation. No adoption plans yet.

Issues

- Continuing to engage with Macrovision on:
 - > Imutils issue (Imrread, Imstat etc)
 - > Options file issues
 - Queuing does not work with MAX option set
 - RESERVE does not work correctly
 - EXCLUDEALL fails for some IP addresses within the same subnet
- Because of limitations Imrread, Cadence continues to recommend users to restart their license server instead of using Imrread.
- From Cadence applications point of view it does not matter if you do a Imrread or restart the server.
